

*Beech 1900C & 1900D*

# Emergency Evacuation Configuration

*Canadian STC# SA22-34  
FAA STC# SA00199IB*

Installed in the time  
it takes to file your  
flight plan

Enhance the value  
of your fleet by  
adding  
up to four  
stretchers  
per aircraft, with  
no permanent  
modification  
required.

# 1900C & D EEC Kits

## No down time, no prep time

The Beech 1900C & D EEC kit (SA22-34) allows you to quickly reconfigure your aircraft to perform stretcher evacuation of non-ambulatory patients.

**Beech 1900C & D EEC kits** include a **stretcher** (similar to standard road ambulance Ferno #9 stretchers, certified for aviation use, including flammability rating) and **two mounting racks**:

- Racks simply lock into existing seat tracks.
- No permanent modification of the aircraft is required. Racks can be left in the aircraft. Patients are loaded on the Beech 1900C & D EEC stretchers, which are transferred into the aircraft and locked into racks.
- Up to four EEC stretchers can be installed in each Beech 1900C & D.

Complete EEC kits can be stored in your inventory until the need arises. In an emergency scenario, the kits can be quickly installed in the aircraft and you can be airborne in an emergency evacuation configuration in very little time.

### Pricing

Each kit: Approval, 1 Stretcher and 2 Racks

1 kit - \$21,090 USD  
2 kits - \$38,180 USD  
3 kits - \$54,270 USD  
4 kits - \$69,860 USD
